HOW TO CALCULATE NON HALF-HOURLY CHARGES

- To calculate the number of Billed Units (electricity consumed) deduct the present meter
- read from the previous and multiply this figure by the multiplier (Multi). Non half-hourly meters may have up to six registers. The time periods these refer to are stated on your invoice. Where more than one register has been used to generate a charge this will be shown. In such cases the Billed Units of each register for a particular time
- period should be summed together to give the 'total' Billed Units. Multiply the Billed Units by their respective Price to calculate the Cost.
- The total (Consumption) is the consumption for all the registers for the period of use. The total cost associated with the total consumption is stated.
- Multiply the Billed Units of the Standing Charge by the Price (if applicable). Multiply the Billed Units of the Capacity Charge by the Price (if applicable).
- Add together the Standing Charge and Capacity Charge to get the Total Other Charges. Apply CCL at the rate specified on your invoice unless any reductions apply.
- VAT is applied at Standard Rate unless any exemptions apply. The sum of these calculations amounts to the Total Electricity Sales.
